Innovative Solution Provider

NxEdge is a vertically integrated supplier of rotatable sputtering targets in North America, building our own proprietary process technology and equipment used to manufacture the targets. We build quality rotatable sputtering targets for customers in the glass industry using a range of materials and methods of fabrication, including arc spray, thermal spray, and plasma spray.

We have changed the rules by producing targets of higher, tighter quality that feature better performance than ever before. In close cooperation with customers, we are currently developing new sputter mechanics and electronic solutions to drastically improve operation yield and target utilization.

At NxEdge, we also service other equipment components, such as end blocks needed by glass coaters. We continue to be an innovative solution provider for customers in the glass industry.

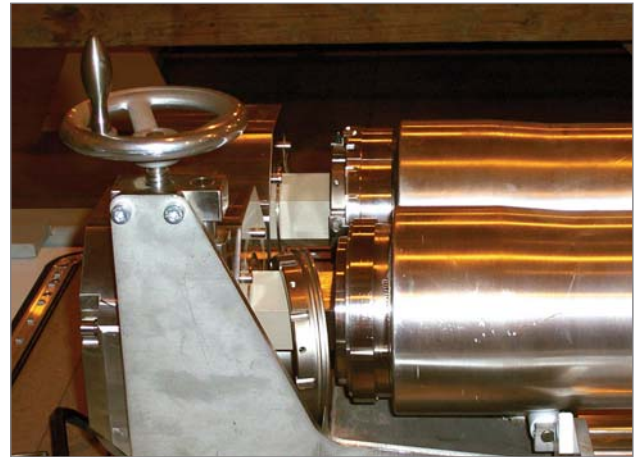

Program Features

- Competitive market pricing
- Short lead time for product delivery
- Custom end block repair service
- Higher, tighter quality and better performance

Our Product

Targets can be made to virtually any length, with custom dimensions or dog bones and on end fixations of your choice. We produce rotatable targets in a variety of materials, including:

- TiOx
- SiAl
- Sn
- ZnAl

Custom End Block Repair

NxEdge offers routine, preventative maintenance or full repair service for both drive and coolant end blocks. All products are turned around quickly and dynamically tested prior to shipping. One year warranty on all repairs and service.
